Infrared and Raman spectra of aminothiazolides and their diazo derivatives. Infrared and Raman spectra of aminothiazolides (phenylacetamides of glycine) and their diazo derivatives, a series of NH-CS-CH2-NH-CS-CH2-CO-R, were measured in the region of 1800-100 cm-1. The frequencies of the ring hydrogen-hydrogen stretching mode, the carbonyl mode, and the geminal formyl vibration were determined. They are rationalized in terms of a spectroscopic model of an equilibrated structure in which the CO and NH-CS-CH2-CO groups are at 90 degrees or in the anti-conformation with respect to the CS-CH2-NH moiety. Vibrations of the phenyl ring are not significantly perturbed by the replacement of the amido-NH-CS-CH2-CO group with an amido-

CO-CH2-NH group. The carbonyl formyl vibration is not significantly perturbed either by the nature of the leaving group (Cl, Br, F) or by the presence of an N-methyl moiety in the amido function.Q 0cc13bf012

Use the PDF linked in the document sidebar for the official electronic format. Start Preamble AGENCY: Department of Transportation. ACTION: Notice of availability of meeting agendas. SUMMARY:

The Department of Transportation (DOT) invites interested parties to attend for discussion of the Federal Transit Administration's (FTA's) Bicycling and Pedestrian Research and Safety program for fiscal year (FY) 2002, September 30, 2001 through October 1, 2002. This consultation is an opportunity for the public to give written or oral comments on those aspects of the program that they are most interested in and would like to see for implementation. This notice serves as an advance notice of the meeting agenda, including issues to be discussed, where appropriate

A labor union of the professional versionl sphere, the CFPRS has been. In the United States, clinical psychologists were licensed from 1996 on: in. To request a license, you must file a.Copper(II)-Catalyzed Aza-Brook Rearrangements of Functionalized Imidazoles under Acidic Conditions. A copper-catalyzed aza-Brook rearrangement of functionalized imidazoles was investigated under acidic conditions. This reaction provides convenient access to an array of substituted benzo[g]-indazoles in moderate to excellent yields. A preliminary mechanism involving mononuclear copper(II) complexes as catalysts and ligands has been proposed.This invention relates to a method of locating an object. The invention is applicable to the identification and location of the position of a mobile object within a cavity or container which may be used to transport the object. It is also applicable to the location and identification of a buried object such as an

unexploded bomb. There are a number of methods employed to locate objects such as mines. One method of detecting mines uses acoustic signals to detect the influence of a mine, such as the vibration caused by a mine explosion. This method however, does not provide enough information to enable the mine to be located.A $1.5 million grant to support local food and farm programs has been awarded to the University of Minnesota. The grant will support programs in the University of Minnesota Extension, the Minnesota Center for Food Systems Innovation, the Minnesota Food Policy Council, and the UofM's Department of Nutrition Science. The Minnesota Center for Food Systems Innovation (CFSI) will use the funds to support the development and demonstration of new and improved approaches to food systems research, community engagement, and nutrition education. The grant will support the recruitment, retention, training and professional development of new and existing investigators to conduct research related to public health and sustainable agriculture, and

to engage with the broader Minnesota community through public events, publications, and food systems outreach activities. "This is a major investment in our state's future health and environment," says CFSI Executive Director Ken Bingaman. "Across Minnesota and the United States, the need for policies and programs that support sustainable food and agriculture is urgent. Through programs and partnerships with our diverse stakeholder groups, the University of Minnesota will continue to create new knowledge that can help meet that need." The Minnesota Center for Food Systems Innovation is an independent institute, housed in the College of Food,
