Run the program. Go to the Preferences dialog box. In the Network tab, check the box that says "Enable AutoCAD RTools Service" In the tab's General tab, in the Options box, type the IP address in the box. In the TCP/IP section, type a port number in the box next to it. (1433 is the default) In the General section, make sure the box next to it is checked When you have everything set up, click OK Now when you launch Autocad it should ask you for the IP address and port. Spatial distribution of zebrafish (*Danio rerio*) and other fish species along a riparian vegetation gradient. The fish fauna of 43 sites across a 48 km<sup>2</sup> landscape in the Coos Bay (USA) estuary was surveyed for five years. The site-based distribution of 12 species of fish was mapped, three times during the study period, to identify the contribution of habitat to site-level species' occurrence. Species abundance was more strongly related to habitat type than to the distance from riparian habitats, although there was significant aggregation of species at the border of freshwater and saltwater habitats. Effects of riparian habitat type were greatest for species associated with high-marsh habitats, which were more closely associated with saltwater habitats than other habitats. Abundance of species was more strongly associated with riparian habitat type than with the distance from the riparian habitats, although there was significant aggregation of species at the border of freshwater and saltwater habitats. The contribution of each species to the overall fish assemblage was estimated using the Redundancy Analysis (RDA) ordination. This showed that the total species richness of the assemblage was best predicted by the combinations of habitat type, distance to riparian habitats, and salinity. The present invention relates to a clip used to seal the panels of a vehicle door. A vehicle body is formed of a plurality of joined panels. Sealing gaskets are typically placed between the panels and the window frames to prevent the passage of air between the panels and the frames. Some of these gaskets include a first strip secured to the window frame and a second strip secured to the vehicle panel. These gaskets may be difficult to install and may require the use of additional sealing strips or additional fasteners to effect a seal. It would be desirable to provide a gasket that requires less force to install. It would

Drafting Tools Improvements In response to customer feedback, new design objects can now be included in your drawing. Just drag and drop an object, shape, or compound shape to the Insert menu. You can also use dynamic commands to cut, rotate, and create compound shapes. In addition, the new Advanced tool bar can be rearranged, and custom templates can now be saved. There's also new Drafting tools when you insert a drawing, such as 3D editing tools and annotating tools. When you're drawing in 3D, you can select or unselect 3D objects, components, or solids to show that you're drawing with or without 3D enabled. You can insert new 3D objects and
