KEYMACRO is an application that allows you to focus on the editing and monitoring of patients with multiple malignant, benign, or post-procedure conditions. On the one hand, you can use the standard list of diseases and medications, set personal goals, define comprehensive reports, and perform time-consuming procedures that can take hours or even days. On the other hand, you can make the regular editing and monitoring of patients or clients a snap by filling in a few fields and pressing the ORBITAL Description: ORBITAL is a medical application that was created to work closely with an electronic patient record to provide the clinician with at-a-glance visibility of a patient's health history, symptoms, and current and upcoming clinical appointments. The application aims to reduce clerical work, while simultaneously improving the efficiency and accuracy of patient care. ORBITAL currently has specific documentation and scheduling functions for patients with skin disease, skin care, and allergy issues, as well as for patients with circulatory and respiratory diseases. ORBITAL lets you collect medical data from the patient's file and then automatically generates a report containing the important patient and treatment information along with the doctor's note and response. The application also uses the standard list of medications and conditions, creating a report for each medication or condition that contains all of the treatment information. The report for each medication includes the patient's medical history, allergies, current treatment, and notes from previous medications or treatments. ORBITAL also allows you to create a "chronic conditions" list that displays a summary of all of the medications or conditions in the patient's record. This list can be customized to show only the most current, or only the most relevant medications. ORBITAL can also automatically retrieve information from other information systems to add additional information to the patient's file, like allergies, immunization dates, and laboratory test results. ORBITAL provides a complete electronic record system for any patient's visit to the doctor, whether it is an examination or a procedure. ORBITAL has support for a wide variety of health information systems and database systems, such as: MediGate Systems Orbital Software Solutions KUSUMI Description: KUSUMI is a digital medical application that is specifically designed to manage patients and deliver the right care at the right time, and it does so in a cost-effective manner.
