Q: How to Check if a Date is Valid using HTTP POST I want to submit a request using HTTP POST but send it the date to check if its a valid date using this format yyyy-MM-dd HH:mm:ss. Any way? Thanks! EDIT: It was a bad question, but I couldn't send the message because I didn't want to use any libraries, just that I needed something that makes this. I was thinking about but I couldn't. A: You can't use a date as parameters. Q: How to insert auto_increment into label? I need to insert a auto-increment into a label. My current query to insert into the SQL Server database is: $sql = "INSERT INTO TABLE (id, name) VALUES (", ")"; I have attempted to add an insert ID auto-increment into my SQL query like this: $sql = "INSERT INTO TABLE (id, name) VALUES (", '".$_POST['name']."')"; In testing, the value I am sending into the POST is being inserted successfully into the SQL Database. The problem is that the database ID of the new row has the value 1 as I am expecting it to have the value 1. The problem seems to occur when the auto-increment begins at the next number. A: Try this. $sql = "INSERT INTO TABLE (id, name) VALUES (", '".$_POST['name']."') SET id=id+1"; You can also get rid of the Db_catalog.id=id+1 query and use this. $sql = "INSERT INTO TABLE (id, name) VALUES (", '".$_POST['name']."') SET id=id+1" Osteochondral fragment reimplantation using an expanded polytetrafluoroethylene (e-PTFE) cup for osteochondral defect of the talus: a retrospective review of 46 patients. Modulation of ATP-sensitive potassium channels by general anesthetics and magnesium in rat cortical neurons. ATP-sensitive potassium (K(ATP)) channels play a vital role in maintaining cellular excitability in the brain. They are also known to modulate the actions of general anesthetics on neurons. Using the whole-cell recording technique, this study examined the effects of general anesthetics on K(ATP) channels. The inhibitory effect of pinacidil on K(ATP) channels in rat cortical neurons was markedly antagonized by general anesthetics. Moreover, the amnesic effects of thiopentone and phenobarbital in the rat Morris Water Maze were significantly attenuated by application of a K(ATP) channel opener, pinacidil. In contrast, the excitatory effect of d-glucose was increased by the application of a K(ATP) channel opener. These findings suggest that general anesthetics and magnesium may modulate cortical neuronal excitability by acting on the K(ATP) channels.Attorney General Jeff Sessions said he will resign as part of an agreement with President Trump. — BREAKING — @jeffsessions tells the AP "I have determined that it is in the best interests of the nation to step down as attorney general effective 6/14."
