Q: How to find the relationship between the initial value of a moving average and its variance? I am struggling to understand the formula for variance of a moving average of a random variable $\text{Var}_f[X] = E[f(X - \bar{X})] - E[f(X)]^2 = E[f(X - \bar{X})^2] - (E[f(X - \bar{X})])^2$ I understand the formula for the variance of a moving average of X is: $\text{Var}[Y] = \text{Var}[Y] + \bar{Y} - (E[Y])^2$ And the variance of Y is $\text{Var}[Y] = E[Y^2] - E[Y]^2$ But I don't understand why the variance is just shifted and changed in its value. Can someone explain why? A: You want to find the variance of a moving average of a random variable
$$E\big[f(X_t - \overline{X})\big] = E\big[f(X_t)\big] - E\big[f(\overline{X})\big] \\ = E\big[f(X_t)\big] - \overline{f(X)}; \end{align}$$
 where the second equality follows from $E[\overline{X}] = \overline{f(X)}$. Then
$$E\big[f(X_t - \overline{X})^2\big] = E\big[f(X_t - \overline{X})\big]^2 + E\big[f(X_t - \overline{X})\big]^2 - 2E\big[f(X_t - \overline{X})\big]$$

Learn more about Markup Import and Markup Assist AutoCAD Shells: Get fast access to critical tools and data by creating customizable shells for your workspace. Create an AutoCAD shell that contains key tools you need the most and easily access them from the Shell Toolbar. Create more organized, flexible, and consistent workspace through a customizable color scheme. An AutoCAD shell theme allows you to modify the color and type of text to be displayed on the Shell toolbar and tool palettes. Learn more about shells Support for End User Profiles: Save customized profiles for your drawing session. The End User profile saves customization settings you've made for layers, line styles, color palettes, and styles. Save and load your End User profile using a Windows Explorer folder. Learn more about End User profiles Other changes: Implemented the Windows 10 design language. The Watermark tool now supports combined scaling and rotation. Ribbonbar shapes in the toolbar are now customizable. Other performance improvements: Draw commands now include smart selection technology, helping speed up many scenarios. The AutoCAD Command Reference uses new search technology to make it easier to find command options. Newly added commands: The ARRAY command enables you to build and manage linestrings. New ribbon commands: The SHAPEBUILDER command adds a visual representation of your drawing. The SHAPEBUILDER tool gives you two methods for creating your drawing: the Fill Path tool or the Graph Builder tool. New ribbon panels: The Topology panel lets you see, edit, and maintain topology information for your object. New toolbar and ribbon icons: The DRAW tools now use a larger, simple icon. Improved rendering: All renderers now support grouping for easier management of displayed groups. Improved symbol rendering: Graphics have a new virtual line that makes drawing symbols more consistent. Improved graphic editing: Graphics have a new virtual line to help you edit them easily. Improved plotting and sizing: Improvements have been made to tooltips for plotting and sizing. Improved datum and drafting orientation: Improved displays for drafting orientations. Autocad Datum:
