The impact of this technology is massive, in that it creates an increased realism and finesse that players can control with new elements of gameplay. For example, players can control the ball with their feet and also use their body to change direction. The game can now reflect players' body movements to create new ball spins and dribbling techniques. Dribbling is one of the key aspects of the new gameplay engine. The player can fake a shot, close down his marker, and then swing the ball around his shin. The new InControl feature allows the player to stay close to his marker and control all of his movements within a dynamic 3D context. Here is EA's official description of the new gameplay features: **Ball Changes Direction:** Player movement and body positions control the ball, altering its spin and movement direction. Bring the ball under control by switching the direction of your feet to change its trajectory and evade an opponent. **Player Movement:** Players can feel every touch and influence where the ball lands. A user-controlled 3D marker guides the movement of the ball. Players can control the ball with their head or arms and bend it down in the air or around their body to perform tricks. Take the ball in and out of play using the new InControl feature. **New Skills:** Players learn new dribbling techniques as they react to the movements of the ball. Master the skill of turning and leaving opponents in the dust. **New Physics & Ball Kinematics:** The physics of the ball is updated to reflect realistic body motion. The ball can bounce in a variety of directions and react to player movements differently on the ground. **Damage Blending:** Physically forcing an opponent to the ground will steal momentum from his body, making it hard for him to get up and keep going. **New Atmosphere:** The new outdoor lighting, foliage, and crowds are the most lifelike in the series to date. **Full Screenscapes:** For the first time, players will be able to enjoy the best UEFA Champions League matches on the greatest, life-like pitch in videogames. **HyperMotion Technology:** The new in-game engine is powered by a state-of-the-art technology allowing developers to bring new levels of player control and physics to FIFA. **Multi-layered Franchise:** New dynamics and improvements to the Franchise Mode ensure that players can enjoy the most rewarding in-game experience.

Features Key:

- Player likeness and animations brought to life using new motion capture technology.
- FIFA 22 introduces "HyperMotion Technology," which uses motion capture data collected from 22 real-life players playing a complete, high-intensity football match in motion capture suits. The data collected from player movements, tackles, aerial duels and on-ball actions is used to power FIFA 22 gameplay.
- Career Mode - Live out your dreams as both a manager and a player in FIFA 22. Create the newest club in FIFA, design your kits, style your stadium, and choose whether to compete with the elite or rise up from the lower divisions as you manage your club to glory. Or test your skills as a player, with a more immersive Player Career mode that gives you more ways to progress, achieve, and immerse yourself in your Pro's journey through the game.
- FIFA Ultimate Team - Play in solo challenges and create your own player card to compete online or on-the-go.
- An updated 3D Bench graphic with animated depth of field data where right-click enables you to view your own team during gameplay.

FIFA was originally developed as a sports management simulation by Michel Subor. The game was released in the North American, Japan, Europe, and Australasia regions on September 26, 1992. The North American version was based on the European game while the Japanese version was based on the European version. The game was released in the PAL regions on September 28, 1992. It was also released for the Amiga and Atari ST as Football Manager, later released as EA Sports Football and Football Manager: European Cup Edition. It was later ported to the PlayStation in 1994, with the player being able to transfer and swap players from the DOS version. FIFA was a success and despite the later popularity of the football video game series, it was the first game to receive the 'Best Sports Game' award in the 1993 Academy of Interactive Arts & Sciences awards. Due to the game's success, EA decided to reboot the series with the release of FIFA 99 for the PC and then FIFA 2000 for the PlayStation and Dreamcast, which would be considered the beginning of the FIFA series. FIFA is a popular game played across many sports, notably in the FIFA video games, with its most recent installment being FIFA 20. The software also features the EA SPORTS FIFA Tackling System, which allows players to turn their head to see where they need to hit an opponent and prevents injuries. Gameplay FIFA includes a selection of different game modes with modes such as Match Day, Training, Community, and Road To Glory appearing in each game. Since its initial release in September 1992, FIFA has included the following game modes: FIFA Classic: A combination of pre-FIFA games with a time limit, in which players are matched up against one another. FIFA Challenge: A collection of minigames created by EA Sports and third party developers including EA and others. Multi-player: Allows up to 8 players to play together. MyClub: A collection of gameplay modes for players to play on their own, similar to Soccer TV. The gameplay system revolves around the formation and the players' technical data. Each player has different attributes, including speed, acceleration, and physical abilities that make them better than others. For instance, the goalkeeper needs to be fast enough to catch the ball, but needs to be quick enough to stop the ball. In a typical game of football, a team is made up of 11 players. The two teams face off with possession
