The German Wehrmacht retreated to new defensive lines in the west; the Red Army regained the initiative and pushed it into Poland; and the pressure from the Americans and the western allies on Japan, put in a final effort to force their surrender. The plan had it that he would be in Hawaii by the time of her tryst. The winery and vineyard are in the. The present disclosure relates generally to phase-only filters. More specifically, the present disclosure relates to low-pass phase-only filters. Low-pass phase-only filters are used in various image processing applications to perform low-pass filtering on images and video to generate images with sharp edges. Low-pass phase-only filters are computationally more complex than a low-pass frequency filter that operates on the image or video data, but have the advantage that they can be easily implemented in hardware. Unfortunately, the conventional approach to generating low-pass phase-only filters is to generate a low-pass phase-only filter that is applied to the entire image or video frame. Therefore, as the desired low-pass filter is translated into a low-pass phase-only filter, the filtered pixels in the image or video frame have a phase change of 2π (i.e., wrapping). This is undesirable because objects in the image that are offset from a horizontal or vertical axis of the image become offset from the horizontal or vertical axis of the low-pass phase-only filtered image. This can cause graphical elements in the image to overlap, or no longer line up along an axis of the image, thereby reducing the quality of the image. Acute Kidney Injury is associated with platelet-specific and non-specific gene expression patterns. Acute kidney injury (AKI) is associated with increased risk for subsequent cardiovascular disease. The underlying cellular mechanisms are not yet fully understood. Platelets might play a role in the pathogenesis of AKI through myocardial and renal inflammation and by mediating atherothrombosis and ischemia/reperfusion injury. Therefore, we aimed to study platelet-
