Q: What should i do with this Rice (Even Mashed White)? (Broccoli?) I was giving to friends as a dinner guest.

I made her a similar meal as usual (mashed white rice and chicken) but I wanted to throw in a broccoli addition as it is good for constipation plus I myself like broccoli in my meals. The problem is she didnt like the dish and kept on talking about the texture and the color. I loved it before but now I'm wondering if what i prepared is not fit for a dinning company. Should i prepare another meal or some other things? Here is the picture of the dish A: I agree with hazmat that your mashed white rice sounds a bit cooked. I think a better option would be cooked or steamed veggies. That said, there is a kind of'melding' between rice and broccoli: they're both sticky and starchy, so they "glue" together. This makes them a pretty amazing, but also a bit weird, combination. People, who don't like rice or broccoli, I feel like I should say: your dish looks like a random pile of things you've thrown together. Personally, I cannot imagine this going well in the hands of a cook who is in the business of making dinner for a crowd. I wouldn't worry too much about it, because, in my opinion, at home is always the best place to experiment

Iron is essential for the manufacture of iron-carrying proteins. Among several factors, diet may play a role in iron absorption. Japan has a population of mixed ethnic origin, with a major fraction of the population originating from north-east Asia, including China, the Korean peninsula, and Japan itself. The aim of the present study was to examine the association between dietary factors and iron deficiency anemia in a group of urban Japanese women living in the area of Nagoya, Japan. We conducted a case-control study in Japan, enrolling 60 women with iron deficiency anemia (cases), and 60 age-matched healthy controls. Dietary data were obtained by the questionnaire-based EPIC 1994 - NINFEA study, and the participants were divided into three groups according to their actual daily intake of iron, heme iron, and zinc: low, medium, or high. We analysed the data of ten matched cases and controls using conditional logistic regression, adjusting for**
