groups with more knowledge and influence are likely to exert greater control over network traffic, and network traffic flows through the network in a way that maximizes the control of the groups. for example, a person might seek to gain control over a network by influencing another person, so that that person, in turn, would seek to affect others in the network, and so forth. this can lead to the formation of a hierarchical network, where nodes with greater degree or influence are more likely to have more control over the flow of information through the network. networks: an introduction illustrates how networks can be used to study questions about power, influence, and the spread of information through a network. in networks, the authors give you a solid foundation in network science and the many different types of networks that exist. they also provide real-world examples of common network types, like friendship networks and citation networks. the book is also ideal for

researchers who are trying to better understand the structure of the social, financial, and biological networks in which we live. networks is a great resource for researchers and students who are interested in understanding the structure of networks and how they function. the authors take you beyond the fundamentals and present you with a comprehensive introduction to network science and real-world applications. you'll be able to use this book to make sense of a wide variety of real-world networks, including: week 6: r. m. karp, s. j. ouyang, j. lafferty, and t. r. ramachandran, a k-core decomposition model for networks with communities. advances in neural information processing systems (nips) 27, 2933-2941 (2014). d. fisher and c. guestrin, updating a social network in the presence of errors. social networks 32, 155157 (2009). e. kogan and a. kogan, a faster graph clustering algorithm. pattern recognition letters 33, 2183-2191 (2012). p.k. dollar, c. bishop, and j. neelon, reducing network noise by using multivariate autoregressive models. behavioral ecology 23, 38-43 (2012). shen, y. zhang, and b. yu, graph

neural networks for image processing. ieee access 7, 1527-1538 (2019).x. yu, p.l. yu, from cnn to graph neural networks: a survey. tip 18, 1-8 (2017). 5ec8ef588b
