All the components in a computer system are in communication with each other. Once you run out of space, the application stops working. Therefore, with a stable storage and an active processor, you will be able to maintain a high level of accessibility and load capacity in your work.

If you are in need of more RAM, you can go out and buy a new computer. However, for that, you will have to part with some of your money. Luckily, RAM is removable and you can also buy more RAM.
